

ENABLING DRUG DISCOVERY ON HPC SYSTEMS UP TO EXASCALE LEVEL

Ligate is a public-private consortium supported by the European High-Performance Computing Joint Undertaking (JU) under grant agreement No 956137.

The JU receives support from the European Union's Horizon 2020 research and innovation programme and Italy, Sweden, Austria, Czech Republic, Switzerland.

LIGATEPROJECT.EU

LIGATE project supports
the development of a
European drug-discovery
platform able to exploit
recent HPC investments
which can run on any
hardware infrastructure.

Portability, tunability and scalability are the 3 key features of the LIGATE solution with a fully integrated workflow that enables to deliver the result of a virtual screening campaign for drug discovery with the highest speed along with the highest accuracy.
